

# Aire~BioMid™

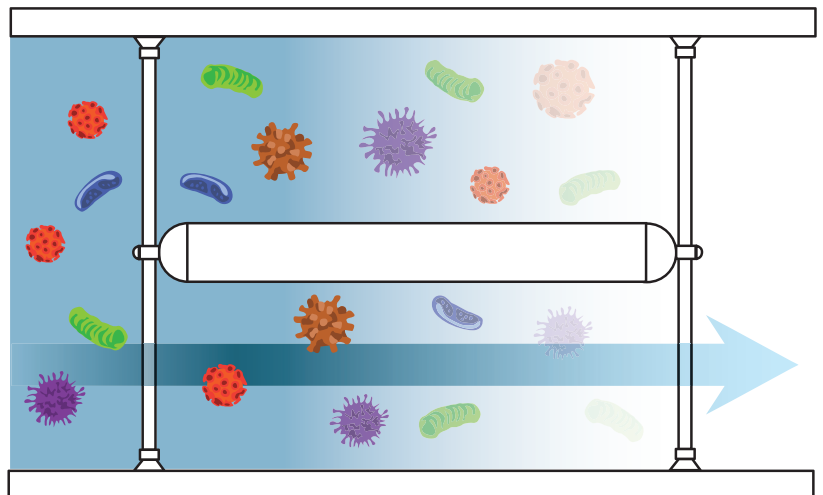

## Ultraviolet Air Disinfection System

### Duct-mounted UV biological remediation system based upon proven LifeAire flagship technology

LifeAire Systems, a global innovator of air purification technologies, has created a product specifically for the remediation of airborne biologicals that cause illness. Depending on the pathogen, they can remain viable and airborne for hours to several days traveling throughout a facility's HVAC system.

- Offered in four different sizes to accommodate different airflows, duct dimensions, and kill effectiveness (30", 40", 50", and 60")
- Installed parallel to airflow, allowing more contact time between particles and UV irradiation
- Minimal pressure drop (0.2")
- Ensures continuous remediation of airborne biological contaminants
- Destroys up to 99.9999% of biological contaminants
- Eliminates infectious pathogens that pass through HEPA filters
- 7" touch screen for real time operational status
- Control box equipped with dry contacts for BMS
- Easy to install

**Mathematically and genomically modeled to provide a 99.999% kill of influenza, COVID-19, and other infectious pathogens on a single pass**
