

LIFEAIRE - ADVANCED AIR PURIFICATION SYSTEM

Continuously kill harmful airborne pathogens, including COVID-19, in a **single pass** which maximizes the protection for residents and staff.

Harmful pathogens can remain airborne for hours to several days. LifeAire's advanced airborne pathogen kill system eliminates the most infectious pathogens, including COVID-19, C. diff, tuberculosis, pneumonia, and influenza, in a **single pass**. This results in reduced transmission of harmful airborne pathogens, which helps to mitigate risk of disease transmission.

The results from a 15-month study at a leading long-term care facility demonstrated:

- 39.75% reduction in Facility Acquired Infections
- 47% reduction in staff call-outs
- 99.99% reduction in airborne pathogens
- 96% reduction in surface pathogens
